DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-17, drawn to a rotary capping apparatus with a closed loop controlling means, classified in class 53, subclass 331.5.
 - II. Claims 18-19, drawn to a specific inflatable gripping device, classified in class 53, subclass 308.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination could utilize an inflatable sleeve not requiring a specific cylindrical sleeve and insert having overhanging flanges as required by invention II. The subcombination has separate utility such as in any rotary capping device without a specific closed loop controlling means as required by invention I.
3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
